GoldenPeacock Innovative Product/Service Award for Recycling of Plastics in Electric Arc Furnace.

MARCH 15 2023
DUBAI

JSW Steel Limited, Vijayanagar Works wins the prestigious Golden Peacock Innovative Products Award for Recycling of Plastics in Electric Arc Furnace in the year 2023.

The Golden Peacock Innovative Product/Service Award is presented annually to organizations that have demonstrated excellence in innovation, sustainability, and corporate social responsibility. The award recognizes JSW Steel's commitment to reducing its carbon footprint and addressing the global issue of plastic waste. This award is a testament to our dedication to creating a more sustainable future.

JSW Steel Vijayanagar Works has been at the forefront of innovation and sustainability in the steel industry. The plant has implemented a number of initiatives to reduce its carbon footprint, including the use of renewable energy sources, energy-efficient technologies, and waste-reduction measures. JSW's innovative approach to sustainability and commitment to quality has helped to establish it as a leader in the steel industry. The company's commitment to quality has been recognized with numerous awards and accolades, including the Deming Prize, the highest award for quality, its focus on innovation and sustainability has also helped to position it for long-term success in a rapidly changing global economy.

TQM department conducts daily management training, equipping employees!

With the mission of engaging employees in improvement activities, through daily management, a training session was conducted for JSW employees at Hitoshi Kume Centre for TQM promotion. The training program covered various topics discussed in detail such as the elements of the daily management system and its implementation plan followed by a workshop on KPI drill down. The trainers from the TQM department shared their expertise and experience, providing valuable insights and practical tips to the participants.

The participants from JSW Mines, shared their thoughts on the training program, stating, "The training provided by the TQM department was very insightful and informative. The trainers shared practical tips and strategies that we can implement in our daily work to improve our productivity and efficiency."

To improve the awareness of quality among the employees and equip them with tools to solve problems in small groups, various training sessions on 7 basic Quality Circle tools have been conducted at Hitoshi Kume Centre for TQM Promotion. More than 76 employees were trained in this program from various departments.

Collaboration

Why daily management trainings are essential.

TQM
VIJAYANAGAR

By participating in regular management training programs, employees can learn new strategies for problem-solving, decision-making, communication, develop leadership and teamwork skills. Daily management training also helps to foster a culture of continuous improvement, where employees are encouraged to identify opportunities for innovation and make changes to processes and procedures that lead to higher quality products or services.

Furthermore, when employees from different departments receive training together, it promotes collaboration and teamwork, which can lead to better outcomes and a more cohesive workplace. Overall, daily management training by TQM Department is an important investment for an organization seeking to improve its operations and achieve long-term success.

Awards and Announcements

Insights about NAMC and IRIM awards.

NAMC (National Awards for Manufacturing Competitiveness) is an awards platform that is aimed at encouraging and recognizing manufacturing units that have adopted global manufacturing practices in their journey to become world-class. The award winners of this program are the companies who have exhibited manufacturing excellence at par with global standards. These companies could also be set as the gold standard for other companies in India to benchmark themselves and catalyse their own manufacturing process excellence.

IRIM (International Research Institute for Manufacturing) is a global research, management consulting, and training firm dedicated to the manufacturing sector. IRIM competitiveness and green manufacturing rating models are considered the gold standard in assessing and recognizing manufacturing firms on their business competitiveness and continuity. More than 500 leading Indian organizations engage with IRIM every year to build strong manufacturing processes.

JSW Steel Vijayanagar, Winner of IRIM Award!

In the picture: Mr LR Singh (COO JSW Steel Vijayanagar Steel Works Receiving Award).

JSW Steel Vijayanagar Works is proud to announce that it has been awarded the prestigious National Awards for Manufacturing Competitiveness (NAMC). The award was received by Mr L.R. Singh, COO, of JSW Vijayanagar Steel Works. This prestigious award is the testimony of JSW's thrust in excellence for its non-conventional and advanced approach in manufacturing and operation excellence over the years.

It has always been a pioneer in innovation, leading the way for the steel industry. The company has consistently been at the forefront of developing new and cutting-edge technologies, setting new standards of excellence for others to follow. The company has also been committed to the highest standards of safety and sustainability, ensuring that its operations have minimal impact on the environment and the communities in which it operates.

The International Research Institute for Manufacturing (IRIM), as an unbiased third party evaluated and rated each company on its unique manufacturing excellence parameter. This rating was achieved through a structured assessment of the manufacturing facility on 10 indicators of IRIM's manufacturing competitiveness framework which are the building blocks behind the calculation of this index. The assessment was customized to each facility by assigning unique weightage to each of these indicators based on the organization's priorities to become more competitive.

The NCQC and Excellence !

The National Convention on Quality Concepts (NCQC), which aims to recognize improvements carried out by QCs across Indian industries, was held in Aurangabad from 27th to 30th December. Case studies were presented in various categories.

The event provides a platform for QC teams to showcase their skills and expertise, exchange knowledge and best practices, and learn from each other's experiences.

The ICQCC

The ICQCC is a prestigious annual event that recognizes companies from around the world for their outstanding achievements in quality control and management. This year, we have won four gold awards at the recently concluded International Convention on Quality Control (ICQC) held in Jakarta Indonesia from November 15-18, 2022.

The awards won by JSW Steel Vijayanagar at the ICQCC are not only a recognition of its excellence in quality control but also a validation of its global competitiveness. They highlight the company's ability to meet and exceed international standards and customer expectations, and its readiness to take on new challenges and opportunities.

Prioritize the Pareto way

Week after week you check off every last item on your to-do list but you still don’t have a lot of impactful work to show for it- besides countless hours of overtime. Sounds familiar? Then it’s time to change your strategy and manage your time better, here’s introducing the Pareto principle for you. The principle states that for many circumstances, roughly 20% of causes lead to 80% of results. Practical examples of the Pareto principle would be:

- 80% of your profits come from 20 % of your products or services.
- 80 % of decisions in a meeting are made in 20 % of the time.
- Fixing the top 20 % of the most reported bugs also eliminates 80 % of related errors and crashes.
- You wear 20 % of your clothes 80 % of the time and so on.

Keeping numbers aside it means a small percentage of causes have an outsized effect. This concept is important to understand because it can help you identify which tasks to prioritize so you can make the most impact. We’re not even aware of how low-impact tasks hijack our day, and we automatically let real progress and advancement slip.

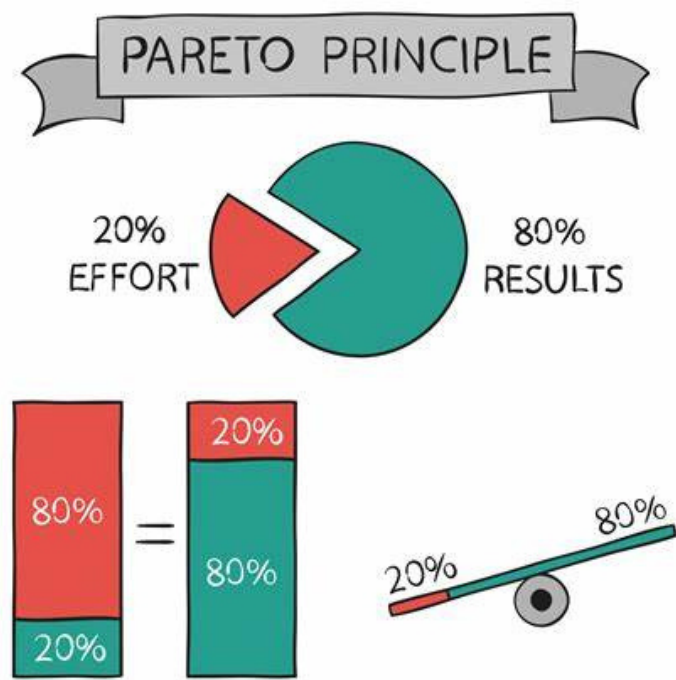

And you already know the problem. Urgent, but unimportant tasks, and tasks that give you a fake feeling of progress, can take up to 80 % or even more of your time. But the impact of those unimportant tasks is minimal in terms of working productively. That’s where the Pareto principle comes in handy. The Pareto principle in time management can help us see the big picture as to what to focus on for the fastest advancement in our work life. It is really taking control over what you do next. And you are always free to choose the task that you will do next. Your ability to choose between the important and the unimportant is the key determinant of your success in life and work. For this reason, before you begin work, always ask yourself, **“Is this task in the top 20% of my activities or in the bottom 80%?”**.

So, adamantly refuse to work on tasks in the bottom 80% while you still have tasks in the top 20% left to be done.

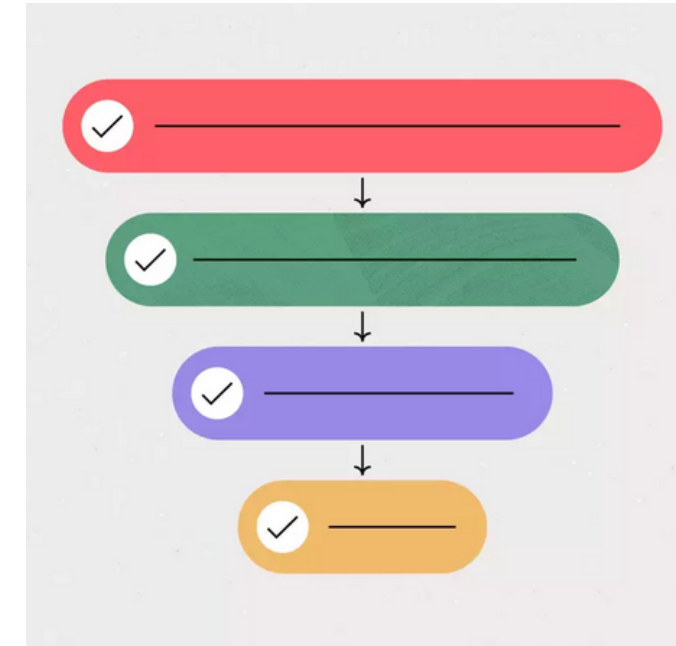

Here is an interesting discovery. Each of the tasks on your to-do list may take the same amount of time to accomplish. But one or two of those tasks will contribute five or ten times the value as any of the others. Often, one item on a list of ten things that you have to do can be worth more than all the other nine items put together. This task is invariably the one that you should do first. Resolve today that you are going to spend more and more of your time working in those few areas that can really make a difference in your life and career, and less and less time on lower-value activities.

Action Exercise ~

Make a list of all the key goals, activities, projects and responsibilities in your life today. Which of them is, or could be, in the top 10% or 20% of tasks that represent, or could represent, 80% or 90% of your results? Resolve today that you are going to spend more and more of your time working in those few areas that can really make a difference in you life and career, and less and less time on lower value activities.

- Explore the flip side.
- Consider getting rid of anything that's taking up 80% of your time, Energy to Resources but only producing 20% of your results.
- Applying the Pareto principle to your life can have a major impact on your career growth, health and happiness.

1. Create a task list.
2. Adopt a task prioritization method.
3. Use a calendar tool to schedule your tasks.
4. Communicate task progress with your teammates.

Brain training

“ According to a recent study published in the International Journal of Geriatric Psychiatry, the more people over 50 engage in games such as sudoku and crosswords, the better their brain functions. Researchers looked at data from about 19,100 participants in the PROTECT study to see how often they performed word and number puzzles. Then they used a series of tests to gauge attention, memory, and reasoning. People who do puzzles have brain function equivalent to 10 years younger than their age, according to the study tests. On short-term memory tests, puzzle takers had brain function equivalent to eight years younger. In short, the more people engaged in puzzles, the better they performed on tests. ”

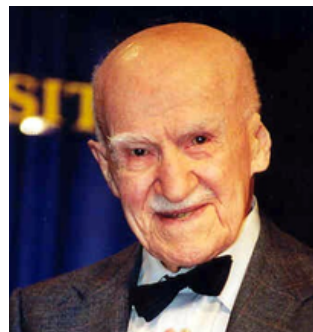

CROSSWORD

- Across
- [2] This value has the highest frequency of occurrence in the sample.
 - [4] This principle is also known as 80/20 principle.
 - [6] Poka-yoke is also known as mistake-_____.
 - [8] It represents SEISO in 5S method.
 - [9]A Japanese term meaning continuous improvement.

- Down
- [1] This Cycle/Wheel is also known as PDCA Cycle.
 - [5] _____ few and useful many is identified by pareto principle.
 - [3] _____ is shown by Scatter diagram between 2 variables
 - [7] Normal distribution resembles this curve.

INBRIEF TQM GURU Juran's Contribution and Principles

Doubtlessly, Dr. Joseph M. Juran has had the most influence on the theory of quality management after Deming among other gurus. His emphasis was more on the managerial aspect of quality. Juran is best known as “the father of modern quality management”, and the publication of his book “Quality Control Handbook” for first time in 1951.

The first is the application of the Pareto principle – also known as the “80/20 rule.” In the context of quality, this means identifying “the vital few and the trivial many” – in other words, the small percentage of root causes in manufacturing or service processes that account for the largest effect in terms of defects or cost.

The second principle involves a change of thinking away from a mere focus on the quality of the end product to a wider examination of the human dimension of quality management.

Why quizzes are an efficient way of learning !

Quizzes can play an essential role in promoting learning and development within an organization. By assessing employees' understanding of the material they have learned, quizzes can help managers identify knowledge gaps and address them through targeted training or coaching.

Furthermore, quizzes can reinforce learning by requiring employees to recall and apply the information they have learned, which can solidify new knowledge in their memories and increase their ability to apply it in real-world situations.

It can also be motivating for employees by providing a sense of accomplishment and recognition for their efforts, which can encourage them to continue learning and applying new knowledge and skills in their work. Additionally, quizzes can provide employees with feedback on their performance, highlighting areas where they have done well and areas where they may need to improve. This can help employees to focus their learning efforts and improve their performance over time, ultimately contributing to the success of the organization.
